

On the Subject of Chronos

"Your cries fall on deaf ears. Fear not, my son. I have not solved any module." – Chronos

This is a module in which Chronus has demanded the defuser to select traits and equivalents of a Greek God. Chronus is a wise God, however, and has shifted some of the options around.

Gods

Below is a table of all the possible Gods, and their equivalents. Instruct the defuser to set the bottom-most display with arrows to the Roman equivalent of the God the defuser has.

Greek God	Roman Equivalent
Zeus	Jupiter
Hera	Juno
Poseidon	Neptune
Demeter	Ceres
Athena	Minerva
Apollo	Apollo
Artemis	Diana
Ares	Mars
Aphrodite	Venus
Hephaestus	Vulcan
Hermes	Mercury
Dionysus	Bacchus

Traits

Below is a table of all the possible traits a God can have. Mark down the trait of your God.

Greek God	Trait
Zeus	King
Hera	Queen
Poseidon	Sea
Demeter	Agriculture
Athena	Wisdom
Apollo	Music
Artemis	Hunt
Ares	War
Aphrodite	Love
Hephaestus	Fire
Hermes	Trade
Dionysus	Wine

Trait Shifting

In Chronus' infinite wisdom, he decided to shift the traits just slightly...

To determine how much your trait is shifted by, instruct the defuser to tell you the **color of the border of the stopwatch** in the top-left.

<u>Golden</u>	<u>Silver</u>
Move trait back 3 steps (reading order). If you reach King, do not loop.	Move trait forward 5 steps (reading order). If you reach Wine, do not loop.

Submission

Once you have determined the correctly-shifted trait and Roman equivalent, instruct the defuser to select those options on the displays.

Since Chronos wanted this module to have even a small resemblance of time attached to it, he's made a timed-submission feature.

To submit, determine first how many seconds the defuser will have to submit based on these edgework rulesets:

- If the bomb contains an **serial port** OR the serial number contains any of the letters in 'JDGE', the defuser will have 2 seconds to submit.
- Otherwise, if the bomb contains an **PS2 port** OR the serial number contains any of the letters in 'GODS', the defuser will have 3 seconds to submit.
- Otherwise, the defuser will have 5 seconds to submit.

Read the next paragraph **VERY carefully & in full** before performing.

To submit, press the stopwatch in the top-left. This will give the defuser how ever many seconds to submit. Then, tell them to press the SUBMIT button. Failure to submit within the time-frame will result in a strike.

You also run the risk of layering a strike if you submit the wrong answer. Make sure your work is correct!
